Use this package as a library

Depend on it

Run this command:

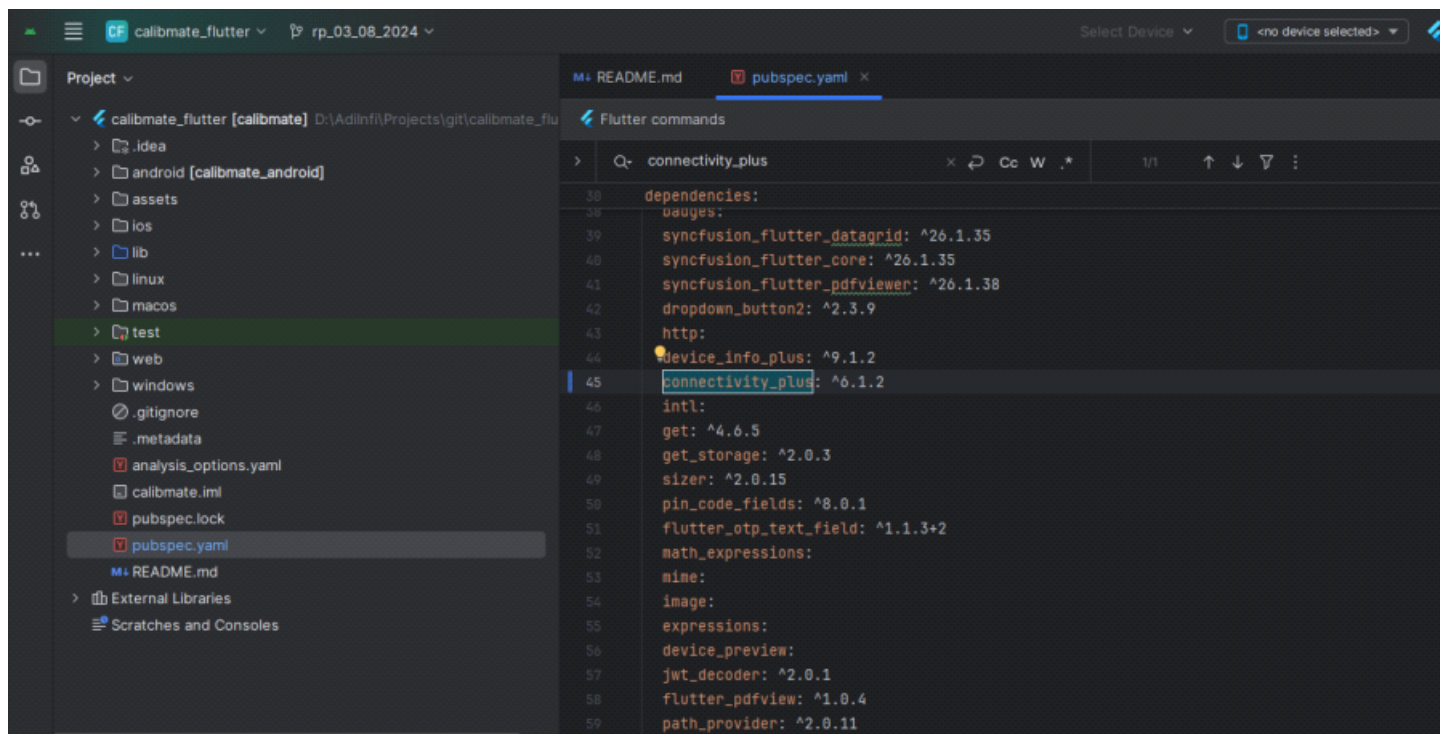

With Flutter:

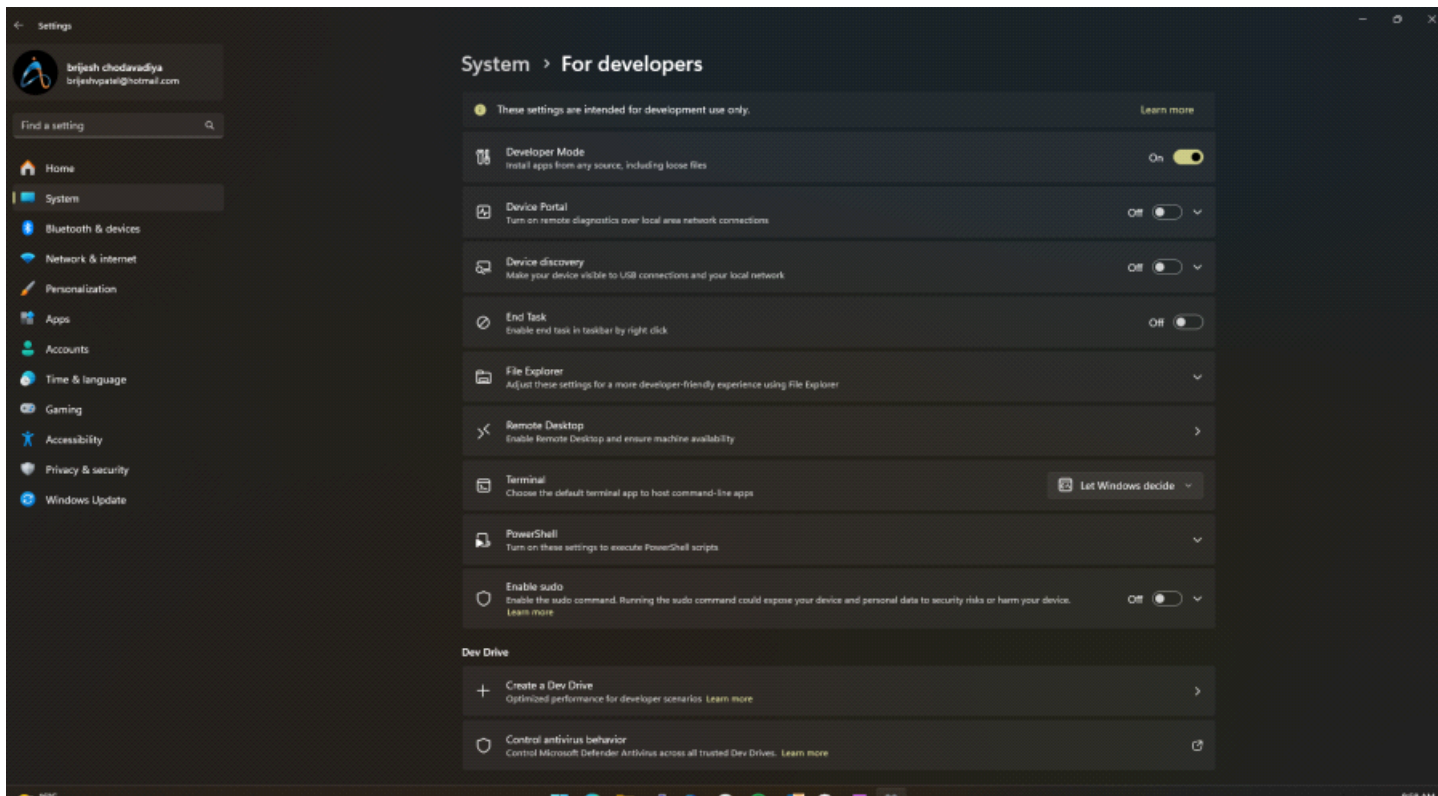

```
$ flutter pub add connectivity_plus
```

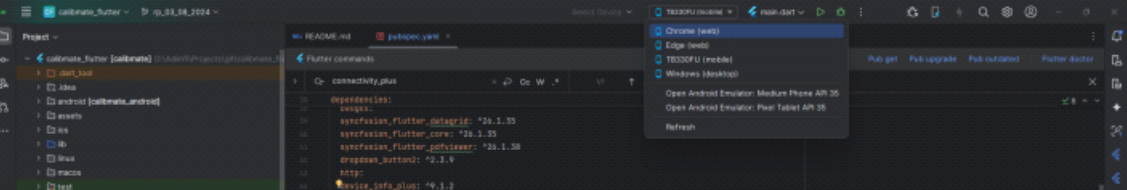

This will add a line like this to your package's pubspec.yaml (and run an implicit `flutter pub get`):

```
dependencies:
  connectivity_plus: ^6.1.2
```

Alternatively, your editor might support `flutter pub get`. Check the docs for your editor to learn more.

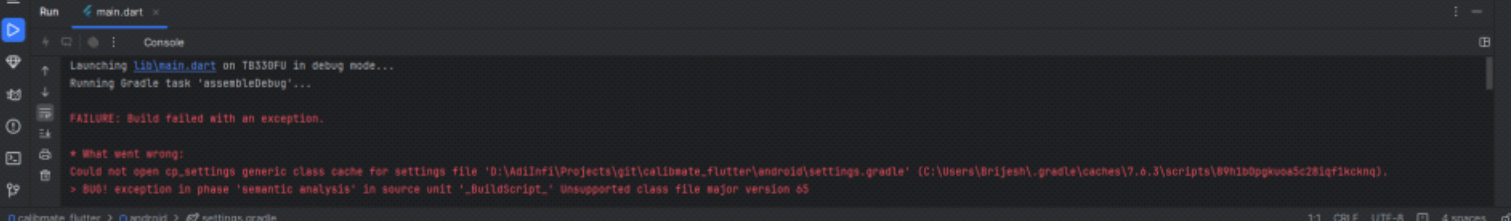

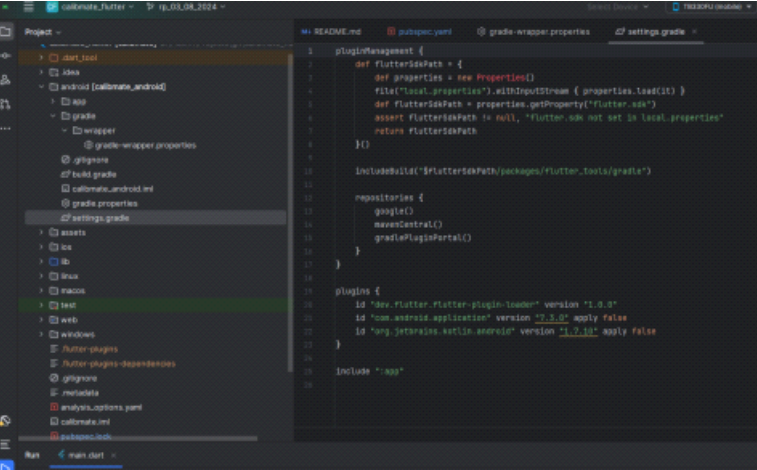

Select tablet and run project.

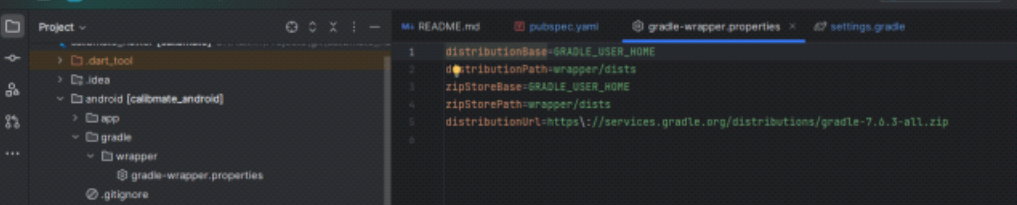

In case of error of gradle version mismatch

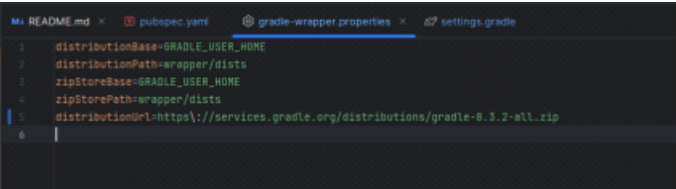

Change gradle settings and change your installed gradle version showing in error message.

Android Java Gradle migration guide

1. [Stay up to date](#)[chevron_right](#)
2. [Breaking changes](#)[chevron_right](#)
3. [Android Java Gradle migration guide](#)

Summary

If you've recently upgraded Android Studio to the Flamingo release and have either run or built an existing Android app, you might have run into an error similar to the following:

The terminal output for this error is similar to the following:

```
sh
FAILURE: Build failed with an exception.
* Where:
Build file '.../example/android/build.gradle'
* What went wrong:
Could not compile build file '.../example/android/build.gradle'.
> startup failed:
  General error during conversion: Unsupported class file major version 61
  java.lang.IllegalArgumentException: Unsupported class file major version 61
    at groovyjarjarasm.asm.ClassReader.<init>(ClassReader.java:189)
    at groovyjarjarasm.asm.ClassReader.<init>(ClassReader.java:170)
    [...
    ...
    ... 209 more lines of Groovy and Gradle stack trace ...
    ...
    [...
    at java.base/java.lang.Thread.run(Thread.java:833)
```

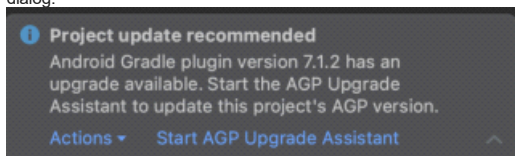

content_copy

This error occurs because Android Studio Flamingo updates its bundled Java SDK from 11 to 17. Flutter uses the version of Java bundled with Android Studio to build Android apps. Gradle versions [prior to 7.3](#) can't run when using Java 17. You can fix this error by upgrading your Gradle project to a compatible version (7.3 through 7.6.1, inclusive) using one of the following approaches.

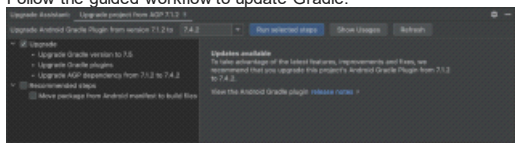

Solution #1: Guided fix using Android Studio

Upgrade the Gradle version in Android Studio Flamingo as follows:

1. In Android Studio, open the [android](#) folder. This should bring up the following dialog:

- Update to a Gradle release between 7.3 through 7.6.1, inclusive.
- Follow the guided workflow to update Gradle.

Solution #2: Manual fix at the command line

Do the following from the top of your Flutter project.

1. Go to the Android directory for your project.
cd android
content_copy
2. Update Gradle to the preferred version. Choose between 7.3 through 7.6.1, inclusive.
.gradlew wrapper --gradle-version=7.6.1
content_copy

Notes

- #
A few notes to be aware of:
- Repeat this step for each affected Android app.
 - This issue can be experienced by those who *don't* download Java and the Android SDK through Android studio. If you've manually upgraded your Java SDK to version 17 but haven't upgraded Gradle, you can also encounter this issue. The fix is the same: upgrade Gradle to a release between 7.3 and 7.6.1.
 - Your development machine *might* contain more than one copy of the Java SDK:
 - The Android Studio app includes a version of Java, which Flutter uses by default.
 - If you don't have Android Studio installed, Flutter relies on the version defined by your shell script's `JAVA_HOME` environment variable.
 - If `JAVA_HOME` isn't defined, Flutter looks for any `java` executable in your path. Once [issue 122609](#) lands, the `flutter doctor -v` command reports which version of Java is used.
 - If you upgrade Gradle to a release *newer* than 7.6.1, you might (though it's unlikely) encounter issues that result from changes to Gradle, such as [deprecated Gradle classes](#), or changes to the Android file structure, such as [splitting out ApplicationId from PackageName](#). If this occurs, downgrade to a release of Gradle between 7.3 and 7.6.1, inclusive.
 - Upgrading to Flutter 3.10 won't fix this issue.

Unless stated otherwise, the documentation on this site reflects the latest stable version of Flutter. Page last updated on 2024-11-11. [View source](#) or [report an issue](#).

Incompatible Gradle JVM

BUG! exception in phase 'semantic analysis' in source

the project.

We recommend upgrading to Gradle version 8.9.

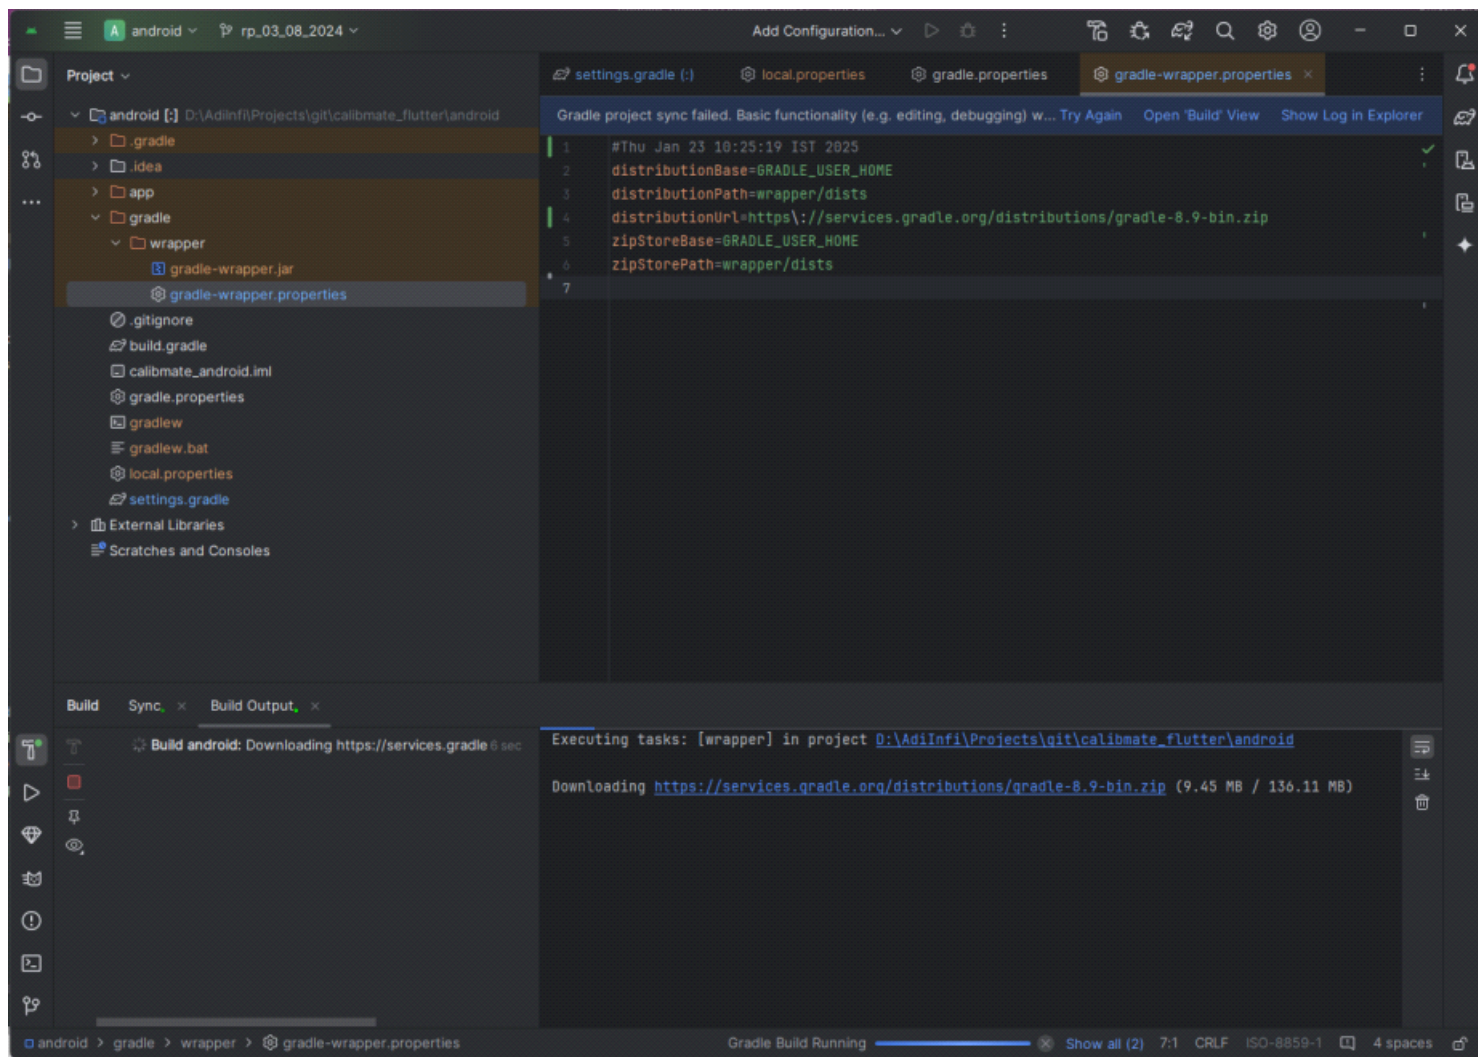

The minimum compatible Gradle version is 8.5.

The maximum compatible Gradle JVM version is 19.

Possible solutions:

- Upgrade to Gradle 8.9 and re-sync
- Upgrade to Gradle 8.5 and re-sync
